

Stormwater Infrastructure Repairs

The Town of Pittsboro is working to repair and rehabilitate the stormwater drainage infrastructure in the public right of way. In the last several years, we have rehabilitated drainage problems on Park Drive and Thompson Street. Our intent is to provide an excellent level of service for the citizens and businesses, given the current budget and staff resources available. Our Stormwater Management Program is growing in steps. This program generally includes water quality projects to protect Robeson Creek and Jordan Lake from pollutants contained in stormwater runoff, drainage infrastructure improvements (such as Salisbury Street improvements) and public education. Be sure to visit our booth at the Street Fair! We also have stormwater regulations for new development and re-development to help reduce pollution, flooding potential and runoff volume. Please see the Engineering Department website for more information.
